

## ***ENVIRONMENT RESOLUTIONS***

### **ENVIRONMENT RESOLUTION NUMBER E-1-2011**

#### **Mandate for Municipal Landfills to take Wild Game Carcasses**

**BE IT RESOLVED THAT** Alberta Environment implement a mandate that all provincial and municipal Class 2 landfills be required to take wild game carcasses.

**BRIEF:** The rural landscape is being littered with wild game carcasses along with plastic, paper and other refuse from processing the wild game. This is giving hunters a bad reputation. Chronic Wasting Disease and other diseases are spread from carcasses being dumped and this would help stop the spread of disease.

### **ENVIRONMENT RESOLUTION NUMBER E-2-2011**

#### **Animal Composting Program**

**BE IT RESOLVED THAT** Alberta Sustainable Resource Development and the Department of Agriculture and Rural Development establish an animal composting program for both wild and domestic animals in an effort to assist with the issues of dead animals on our roadways and rural landscape, and

**BRIEF:** Other jurisdictions have proven success in composting cattle and game animals whereby animals can be fully composted within a matter of just a few weeks. This will minimize the problem of predator issues on the roadways and in the ranching community. This would also minimize the spread of diseases through the transition of animal material throughout the landscape.

### **ENVIRONMENT RESOLUTION NUMBER E-3-2011**

#### **Water Allocation System Review**

**BE IT RESOLVED THAT** the Government of Alberta facilitate a comprehensive public input process to consider all options as part of their Water Allocation System Review.

**BE IT FURTHER RESOLVED THAT** no new market driven transfers of water allocations be considered until the Water Allocation Review is complete.

**BRIEF:** As market based transfers are being permitted before the Water Allocation System Review is completed, it will be increasingly difficult to implement non-market based alternatives.
