INSTRUCTIONS

All measurements must be made with ¼-inch wide flexible steel tape to the nearest one-eighth of an inch. Wherever it is necessary to change direction of measurement, mark a control point and swing tape at this point. Enter fractional figures in eighths, without reduction. Official measurements cannot be taken until horns have air dried for at least 60 days after the animal was killed.

A. Greatest Spread is measured between perpendiculars at a right angle to the centerline of the skull.

B. Tip-to-Tip spread is measured between tips of the horns.

C. Length of Horn is measured from the lowest point in front over outer curve to a point in line with tip.

D-1 Circumference of Base is measured at a right angle to axis of horn. **Do not** follow irregular edge of horn; the line of measurement must be entirely on horn material.

D-2-3-4 Divide measurement C of longer horn by four. Starting at base, mark **both** horns at these quarters (even though the other horn is shorter) and measure circumferences at these marks, with measurements taken at right angles to horn axis.

Drying Period: To be eligible for entry in the Alberta Records, a trophy must first have been stored under normal room temperature and humidity for at least 60 consecutive days. No trophy will be considered which has in any way been altered from its natural state.
